¹Composite data and characteristics as of 6.30.25. The composite used to calculate strategy characteristics (Characteristic Composite) is a subset of the account group used to calculate strategy performance (Performance Composite). The Characteristic Composite excludes any account in the Performance Composite where cash exceeds 10% of the portfolio. Inclusion of the additional accounts in the Characteristic Composite would likely alter the characteristics displayed above by the excess cash. Please contact us if you would like to see characteristics of Appleton's Performance Composites. 2 Yield to Worst (YTW) and Yield to Maturity (YTM) assume that the investor holds the bond to its call date or maturity. YTW and YTM are two of many factors that ultimately determine the rate of return of a bond or portfolio. Other factors include re-investment rate, whether the bond is held to maturity and whether the entity actually makes the coupon payments. ³Taxable-Equivalent YTW is based on the YTW and the highest marginal federal income tax rate of 37% plus 3.8% tax on net investment income (40.8% total). This calculation is intended for illustrative purposes only to demonstrate the effect of tax-free treatment of municipal bonds on yields. 4Yield is a moment-in-time statistical metric for fixed income securities that helps investors determine the value of a security, portfolio or composite. Current Yield strictly measures a bond or portfolio's cash flows and has no bearing on performance. For calculation purposes, Appleton uses an assumed cash yield which is updated on the last day of each quarter to match that of the Schwab Municipal Money Fund. 5AAA includes cash and pre-refunded bonds; Credit rating for each security is determined by taking the higher rating of S&P and Moody's.
